OVERVIEW

MiniAd has been designed with a special eye toward high quality. It includes 700 programmable kern pairs, 3 tracks of kerning, automatic pi lookup, advanced width table program that includes the ability to modify width and autokern combinations, and a menu system that accompanies the dictionary and width table utility programs for easy input and modification. The system comes with two 400 editing terminals, a PageView, 10 megabytes of storage, a magnetic tape streamer for archiving and backup, and a typesetter driver program.

APPLICATION OVERVIEW

MiniAd is low cost entry level system designed with features for the ad typographer. The combination of software and hardware enable the user to get speedy turnaround and the quality of output essential to his market place today and allows for additions and growth in the future.

Commercial: The Commercial typographer with assorted advertising will appreciate the ease and flexibility of file management, the consistent quality of output and the various typographic enhancements that make MiniAd ideal for his application.

Inplant: The advertising department of any large company could put the MiniAd to work for their corporate advertising and inplant typesetting needs.

FEATURES and BENEFITS

Low package price
Allows the smaller typographer to get the flexibility, consistency and added power of a CCI front-end system at a competitive price.

PageView
A high-quality preview device that allows the operators to look at the job in its finished form prior to typesetter output.

Advanced width/kern program
With 700 kern pairs individually programmed for each font plus the ability to set up tracks of tightness for each point size, the system will output consistently higher quality work than ever before possible.

Commercial tabular program
The Commercial Tab package gives the user the broadest spectrum of tabular flexibility in the industry. Complex tables and forms work can be set easily and quickly.

Software reverse leading
Tells the computer to calculate where all the copy in a job will fall before sending it to the typesetter so there is no necessity to use hardware reverse lead.

XY positioning
Allows complex advertising makeup, two column paging and forms work to be done quickly and efficiently.

SPECIAL CONSIDERATIONS: Systems that support it: N/A. Memory consideration: 256KB. Environmental: Office. Modem Type: N/A. MUX channels: Up to 8. Communication protocol: CCI.
